

Complete Summary

TITLE

Influenza vaccination: percentage of patients aged 65 years or older who received at least one influenza vaccine in the past two years.

Process

The validity of measures depends on how they are built. By examining the key building blocks of a measure, you can assess its validity for your purpose. For more information, visit the [Measure Validity](#) page.

SECONDARY MEASURE DOMAIN

Does not apply to this measure

Brief Abstract

DESCRIPTION

This measure is used to assess the percentage of patients aged 65 years or older who received at least one influenza vaccine in the past two years.

RATIONALE

Provincial guidelines recommend that all adults aged 65 years or older receive annual influenza vaccinations. Despite Manitoba Health's public campaign as well as evidence that the influenza vaccination has significant impact on mortality rates among those 65 and older, over one-third of older adults are not being vaccinated.

PRIMARY CLINICAL COMPONENT

Influenza; vaccination

DENOMINATOR DESCRIPTION

Patients aged 65 years or older assigned to a family physician (see the related "Denominator Inclusions/Exclusions" field in the Complete Summary)

NUMERATOR DESCRIPTION

Number of patients from the denominator who received at least one influenza vaccination in the past two years

Evidence Supporting the Measure

EVIDENCE SUPPORTING THE CRITERION OF QUALITY

- A clinical practice guideline or other peer-reviewed synthesis of the clinical evidence
- A formal consensus procedure involving experts in relevant clinical, methodological, and organizational sciences
- Focus groups
- One or more research studies published in a National Library of Medicine (NLM) indexed, peer-reviewed journal

Evidence Supporting Need for the Measure

NEED FOR THE MEASURE

Overall poor quality for the performance measured
Use of this measure to improve performance
Variation in quality for the performance measured

EVIDENCE SUPPORTING NEED FOR THE MEASURE

DESCRIPTION OF CASE FINDING

Patients aged 65 years or older assigned to a family physician (see the "Denominator Inclusions/Exclusions" field)

DENOMINATOR SAMPLING FRAME

Patients associated with provider

DENOMINATOR INCLUSIONS/EXCLUSIONS

Inclusions

Patients aged 65 years or older assigned* to a family physician

*A patient is allocated to the physician with the most visits (as defined by cost). In the case of a tie, the patient is allocated to the physician with the greatest total cost. Total cost calculations include direct care (i.e., visits) and indirect care (i.e., referrals to other physicians or for services such as lab tests and x-rays).

Exclusions

Unspecified

RELATIONSHIP OF DENOMINATOR TO NUMERATOR

All cases in the denominator are equally eligible to appear in the numerator

DENOMINATOR (INDEX) EVENT

Patient Characteristic

DENOMINATOR TIME WINDOW

Time window is a single point in time

NUMERATOR INCLUSIONS/EXCLUSIONS

Inclusions

Number of patients from the denominator who received at least one influenza vaccination in the past two years

Exclusions

Unspecified

MEASURE RESULTS UNDER CONTROL OF HEALTH CARE PROFESSIONALS, ORGANIZATIONS AND/OR POLICYMAKERS

The measure results are somewhat or substantially under the control of the health care professionals, organizations and/or policymakers to whom the measure applies.
